

## AL

**Inderuar përdouer**, e **nderuar** instaluk,

Duke iu falënderuar që zgjodhët produktin tonë, ju ftojmë të lexoni me vëmendje shëniet e mëposhtme të rëndësishme, dhe i lutemi instaluesit që t'i japë përdoruesit të paktën një kopje të tyre.

Radiatorët kanë garanci 10 vjet, me përjashtim të gamës Aleternum, e cila ka garanci 20 vjet. Garancia mbulon defektet e mundshme të prodhimt duke filluar nga data e blerjes ose e instalimit. Për zbatimin e garancisë, duhet të paraqitet dokumenti i blerjes ose deklarata e konformitetit të impiantit që jepet nga instaluesi. Brenda këti afati ndërrohen radiatorët që dallohen se kanë defekte në prodhim dhe për çdo dëm që u shkaktohet personave ose objekteve jepet kompensim. Instalimi duhet të bëhet nga persona të kualifikuar, për sa i përket ligjeve dhe normave në fuqi, si edhe për sa i përket praktikës së mirë. Gjithashtu duhet të zbatohen udhëzimet për instalimin, përdorimin dhe mirëmbajtjen që tregohen në poshtë në dokumentacionin tonë tekniko-komercial.

Gjatë instalimit, nuk duhet të përdoren radiatorë që tashmë kanë dalë me defekt.

##### UDHËZIME PËR INSTALIMIN

Për instalimin, mbanì në veçanti parasysh se:

- radiatorët mund të përdoren në impiante me ujë të ngrohtë dhe avull (temperatura maksimale 120 °C);
- për të gjitha modelat, presioni maksimal i punimit është 16 bar (1600 kPa);
- për të fiksuar niplat, aplikoni një forcë shtërnguese prej 50 deri në 80 Nm. Mos e kaloni 80 Nm;
- radiatorët duhet të instalohen në mënyrë të tillë që të sigurohen distancat minimale të mëposhtme: nga dyshemeja 12 cm; nga muri mbrrapa 2 ÷ 5 cm; nga hapësirat ruajtëse ose raftet 10 cm;
- në rast se muri i pasmë nuk është i izoluar mjaftueshëm, siguronì izolim shtesë në mënyrë që të parandaloni në maksimum largimin e nxehtësisë jashtë;
- secili radiator duhet të pajiset me një valvul shfryrjeje, mundësisht automatike (sidomos nëse është e domosdoshme që radiatori të izohet nga impianti);
- uji i impiantit të ngrohjes duhet të ketë vlerë pH prej 7 deri në 8 (midis 5 dhe 10 për modelet "Aleternum") në temperaturë 25 °C dhe duhet të trajtohet me produkte specifike të posaçme për impiantet multimetallike, duke zbatuar normat në fuqi UNI CTI 8065. Zbatimi i kësaj norme është e detyrueshme me ligji (ligji i datës 5/3/90 nr. 46, DPR 28/8/93 nr. 412, DPR 21/12/99 nr. 551). Për këtë arsye, përdorni produkte specifike të përshatshme si CILLIT HS 23 Combi, Fernox Protector F1 ose Sentinel X100;
- përdorimi i ujit me karakteristika gërryese, kundrejt komponentëve metalikë të impiantit është në përgjithësi i ndaluar dhe e bën automatikisht të pavlefshme garancinë;
- sipërfaqet e qëndrimit të guarnicioneve mbajtje të elementëve anësorë janë gjithnjë të lyera: për niplat dhe montimin e tapave mos smerloni ose më keq akoma, t'i mbushni për të shmangur humbjet e ujit.
- mos i instaloni radiatorët në ambiente me shumë lagështi, si për shembull në pishina, sauna, etj.

##### UDHËZIME PËR PËRDORIMIN OSE MIRËMBAJTJEN

- për pastrimin e sipërfaqeve, mos përdorni asnjëherë produkte gërryese;
- mos përdorni humidifikatorë në materiale poroze, si për shembull, materiale balte;
- mos e izoloni radiatorin nga impianti duke e mbyllur plotësisht valvulën;
- në rast se është e nevojshme ta shfryni radiatorin tepër shpesh, kjo është shenjë e një anomalie në sistemin e ngrohjes, ndaj duhet të kontaktoni një teknik të besuar ose direkt zyrtër tonë.

## EE

**Lugupeetud kasutaja/paigaldaja**,

täname, et olete valinud meie radiaator.

Lugege tähelepaneidkui läbi alljärgnev kasutusjuhend, millest vähemalt ühe koopia palume paigalduse vältimiseks kliendile jätta. Kõikidel alumiiniumradiaatoritel on 10-aastane garanti, erandina on mudeli Aleternum garanti 20 aastat.

Garantii katab mistahes tootmisvead mis ilmnevad pärast ostu või paigaldamist: garantii kehtib ostudokumendil või paigaldaja poolt väljastatud paigalduse vastavusdeklaratsioonil näidatud kuupäevast. Garantiperioodi jooksul vahetatakse välja radiaatorid, millel ilmnevad valmistamisvead ja hüvitatakse võimalikud nõuded neist johtuva materiaalse kahju või kehavigastuste suhtes. Paigaldust tohib teostada ainult vastavat kvalifikatsiooni omav spetsialist kooskõlas kehtiva seadusandlusega ning tehniliste nõuetega. Lisaks sellele tuleb kinni pidada käesolevas juhendis ja samuti meie tehnilises ja müügidokumentatsioonis ära toodud paigaldus-, kasutamis- ja hooldusjuhistest. Keelatud on paigaldada radiaatoreid, millel on nähtav defekt.

Paigaldamisel tuleb eelkõige arvestada järgneva:

• radiaatoreid võib kasutada vee- ja auruküttesüsteemides (maksimaalne soojuskandja temperatuur 120 °C);

• kõigi mudelite maksimaalne töö rõhk on 16 baari (1600 kPa);

• nipelite pingutamiseks tuleb rakendada pöördemomenti vahemikus 50-80 Nm. Mitte ületada 80 Nm;

• radiaatori paigaldamisel tuleb jätta järgnevad miinimumkaugused: 12 cm põrandast; 2 ÷ 5 cm tagaseinast; 10 cm võimalikult aknalaualast või muust radiaatori kohal asetsevast piirdest;

• kui radiaatori taga asuva seinä soojustus pole piisav, paigaldage lisaisolatsioon, et soojuskaod miinimumini viia;

• igale radiaatorile peab olema paigaldatud õhutusventiil, soovitatavalt automaatne (sidomos nëse është e domosdoshme që radiatori të izohet nga impianti);

• uji i impiantit të ngrohjes duhet të ketë vlerë pH prej 7 deri në 8 (midis 5 dhe 10 për modelet "Aleternum") në temperaturë 25 °C dhe duhet të trajtohet me produkte specifike të posaçme për impiantet multimetallike, duke zbatuar normat në fuqi UNI CTI 8065. ## EN

**Dear User/Fitter,**

Thank you for choosing this product.

thank you for choosing this product. Before proceeding please read the following instructions carefully. At least one copy should be given to the end user. All die-cast radiators have a 10 year guarantee, while Aleternum radiators are granted 20 years.

The guarantee covers all manufacturing defects from the date of purchase or installation as stated on the proof of purchase or the conformity certificate issued by the installer.

Within the guarantee period, radiators with manufacturing defects will be replaced and damages to people or objects as a result of defects, will be reimbursed. The installation should be carried out by qualified installers only, in conformity with the laws and standards in force.

The following instructions regarding installation, use and maintenance and those indicated in our commercial documents must be observed. Radiators with visible defects must not be used.

##### INSTRUCTIONS FOR INSTALLATION

When installing the radiator please take the following into account:

• the radiators can be used in hot water and vapour systems (maximum temperature 120 °C);

• for all models, the maximum working pressure is 16 bar (1600 kPa);

• to tighten the nipples apply a tightening torque between 50 and 80 Nm. Do not exceed 80 Nm;

• the radiators must be installed in such a way as to guarantee the following minimum distances: 12 cm from the floor; 2 ÷ 5 cm from the rear wall; 10 cm from alcoves or shelves;

• the rear wall must be sufficiently insulated in order to prevent heat loss;

• each radiator must be equipped with an air valve, if possible an automatic one (especially if the radiator is to be separated from the system);

• at a temperature of 25 °C the system water's pH must be between 7 and 8 (between 5 and 10 for models "Aleternum" only); it should be treated with products for multimetal systems - reference should also be made to standards in force in the country of installation. Only specific products, such as CILLIT HS 23 Combi, Fernox Protector F1 or Sentinel X100, should therefore be used;

• if the water in the system is shown to be corrosive, the guarantee will automatically be rendered void;

• the surfaces supporting the seals of the side elements are always painted; when assembling the sections threading and fitting the plugs, do not sandpaper or file them to avoid any water leaks;

• Do not install the radiators in very humid environments such as swimming pools, saunas, etc.

##### INSTRUCTIONS FOR USE AND MAINTENANCE

- abrasive products must not be used to clean the radiator's surfaces;
- porous humidifiers such as earthenware must not be used;
- the radiator should not be cutoff from the sytem by closing the valve completely;
- if the radiator needs to be vented on a regular basis, this indicates that the system it is not functioning properly and a trusted technician, the official importer's after-sales service should therefore be contacted.

Paigaldamisel tuleb eelkõige arvestada järgneva:

• radiaatoreid võib kasutada vee- ja auruküttesüsteemides (maksimaalne soojuskandja temperatuur 120 °C);

• kõigi mudelite maksimaalne töö rõhk on 16 baari (1600 kPa);

• nipelite pingutamiseks tuleb rakendada pöördemomenti vahemikus 50-80 Nm. Mitte ületada 80 Nm;

• radiaatori paigaldamisel tuleb jätta järgnevad miinimumkaugused: 12 cm põrandast; 2 ÷ 5 cm tagaseinast; 10 cm võimalikult aknalaualast või muust radiaatori kohal asetsevast piirdest;

**Уважаемый покупатель, уважаемый монтажник!**

Благодарим Вас за покупку наших радиаторов.

Благодарим Вас за покупку наших радиаторов и просим внимательно ознакомиться со следующими рекомендациями.

На все литые под давлением радиаторы предоставляется 10-летняя гарантия, за исключением линейки Aleternum, срок действия гарантии которой составляет 20 лет.

Гарантия распространяется на все производственные дефекты, выявленные с даты покупки или монтажа радиатора, указанной на товарном чеке или Акте установки оборудования при условии, что установка произведена квалифицированным специалистом с соблюдением всех требований действующих норм монтажа и рекомендаций производителя по.

Кроме того, необходимо соблюдать инструкции по установке, эксплуатации и техобслуживанию, данные в документе «Паспорт и инструкции по установке и эксплуатации», прилагаемому к изделию при продаже. Далее приводится неполная выдержка из него.
